In the rejections infra, generally, reference labels are recited only for the first recitation of identical claim elements.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3, 8 and 9 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by applicant's admitted prior art.

At page 1, line 19 to page 3, line 14; and page 6, lines 10-11; applicant admits as prior art a semiconductor device comprising: a carrier substrate comprising 101, 106a; a temperature sensing resistive element 106d directly deposited on the carrier substrate; a semiconductor element mounting portion 102b laid on the carrier substrate; and a semiconductor element 103 mounted on the semiconductor element mounting portion; wherein the carrier substrate is formed of ceramics; conductive patterns 102a, 102b that are formed on the carrier substrate and (at least indirectly) connected with the temperature sensing resistive element at a temperature sensing resistive element portion (all portions) thereof, which is of an inherently selected width; wherein the semiconductor element is a semiconductor laser; wherein an inherent heat sink 104 is interposed between the semiconductor laser and the mounting portion.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art as applied to claims 1-3, 8 and 9, and further in combination with Chiba (5045866).

Applicant does not appear to explicitly disclose as prior art wherein the temperature sensing resistive element contains at least one of Mn, Ni, Co, and Fe.

Nevertheless, at column 6, lines 19-28, Chiba discloses wherein the temperature sensing resistive element "thermistor" contains at least one of Mn, Ni, Co, and Fe. Moreover, it would have been obvious to combine this disclosure with the disclosure of applicant's admitted prior art because it would facilitate provision of the resistive element of applicant's admitted prior art.

Claims 4-6 are allowed.

Applicant's remarks filed 2-10-5 have been fully considered and are adequately addressed by the rejections supra.

The art made of record and not applied to the rejection is considered pertinent to applicant's disclosure. It is cited primarily to show inventions similar to the instant invention.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
